THE FREE GUIDE · COMMENT SKILL

Antigravity se video, *free*

Everything from the reel: the install prompt, the secret skill, the master prompt and the Pal Pal lyrics prompt. Copy, paste, done.

SIMPLE You give Antigravity a song, its lyrics and a style. It writes the video as code and turns it into an MP4. You never open an editor.

The 4 steps

1. **Install Antigravity** and pick the free model. This page
2. **Paste the setup prompt** once. Page 2
3. **Add the secret skill**, Lemo-Opuscar. Page 2
4. **Fill the master prompt** with your song. Pages 3–4

Step 1 · Install Antigravity

1. Google **Antigravity** and open **antigravity.google**.
2. Click **Download** and pick your laptop (Mac: Apple Silicon or Intel; Windows; Linux).
3. Install it, open it and **sign in with Google**.
4. Open an empty folder, for example **my-videos**. Your videos are saved here.

Pick the model: Gemini 3.8 Flash

Open the model menu under the chat box and choose **Gemini 3.8 Flash**. It's free and it made the video in the reel. The free plan has weekly limits, so if you run out, wait for the reset.

STEP 2 · SETUP

Paste this once.

Paste it into Antigravity's chat, not into Terminal. It installs every tool the video needs.

```
Set up this computer to make animated videos.
1. Check Node.js 22+, FFmpeg, Python 3.11 and Chrome. Install anything missing.
2. Run: npx skills add heygen-com/hyperframes -g -y -a antigravity
3. Run: npx skills add lemomo-ai/lemo-opuscar -g -y -a antigravity
4. Run: npx --yes hyperframes@0.8.143 doctor and fix anything it reports.
5. Make a Python venv in ~/video-tools with: torch torchaudio librosa demucs.
6. Install whisper.cpp (whisper-cli) and download the ggml-large-v3 model.
Tell me at the end what works and what failed.
```

While it runs

1. Keep about 10 GB free and stay on good Wi-Fi.
2. When it asks to run a command, read it and click allow.
3. It can take a while. Let it finish.

If something failed

```
Fix everything that failed
above, one at a time. Test each
one and tell me when all of it
works.
```

STEP 3 · THE SECRET SKILL

Lemo-Opuscar.

66 film styles, all made with code. Open **github.com/lemomo-ai/lemo-opuscar**, click **Code**, copy the link, and send this:

```
clone this repo and save it as skill - https://github.com/lemomo-ai/lemo-
opuscar.git
```

Wait until it says the skill is saved. If you already ran line 3 of the setup prompt, it's installed already.

STEP 4 · THE MASTER PROMPT

Fill 3 things.

This is the only prompt you need for a lyric video. Swap the yellow parts and press Enter.

```
Make a 9:16 lyric video.
SONG: [put your song file here]
LYRICS: [paste lyrics, one line per row]
STYLE: [describe the look]
Sync every word to the singing, check the timing before rendering, then render an
MP4 and tell me where it is.
```

How to fill it

SONG	The path to your MP3. Easiest: drag the file into the chat box, or put it in Downloads and write **~/Downloads/song.mp3**.
LYRICS	One line per row, in the order they're sung. Only the lines in your clip.
STYLE	Describe the look like you'd tell a friend: font, colours, how words appear, background. Or name a Lemo-Opuscar style.

Make it 16:9 or a different length

Change **9:16** to **16:9** for YouTube. Keep the first one short, 10–30 seconds, so it renders fast and saves your free limit.

SIMPLE

SONG is what you hear. LYRICS is what you read. STYLE is how it looks. The last line makes Antigravity check its own timing before it renders.

THE EXAMPLE FROM THE REEL

The Pal Pal lyrics prompt.

Afusic's Pal Pal, in the Aao Milo Sajna style. Copy it as it is and change only the song path.

```
Make a 9:16 lyric video.
SONG: ~/Downloads/Afusic - Pal Pal (Official Music Video) Prod.
@AliSoomroMusic_17_27.mp3
LYRICS:
Pal-pal jeena muhaal mera tere bina
Yeh saaray nashay bekaar
teri aankhon ke siwa
Ghar nahi jaata, mein bahar
Rehta tera intezaar
Mere khuwabon main aa naa
kar ke solah singhaar
STYLE: Epic word-by-word. One lowercase word in the centre, timed to the singing, bold Poppins ExtraBold with tight letter spacing. Background is a duotone (deep blue in the first half, wine red after) with film grain. The text inverts colour over light and dark areas, like a difference blend. White flash frames on strong beats, and a pixel-mosaic dissolve between lines.
Sync every word to the singing, check the timing before rendering, then render an MP4 and tell me where it is.
```

Words are late

```
The words appear too late. Re-
time them from the vocals and
show me the frame at 0:05.
```

Want a change

```
Make the text bigger and use red
in the second half. Show me 3
frames before rendering.
```

Use songs you have the right to post. Tag **@aansh.ai** when you post yours. Model names checked 11 Nov 2026; trust the menu in your app.
